

Full Face Lift

This is a procedure to remove visible signs of ageing such as deep creases on face, a slack jawline and folds around the neck. It involves removing excess fat, tightening underlying muscles and redraping the skin.

Turn back that clock by many years!

Full Face Lift

**Length of hospital stay
2 nights.**

The face is probably the most visible feature through which expressions of feelings are conveyed to the outside world. The aging process however, may impact those expressions significantly: sagging of facial tissues, skin wrinkles, droopy eyelids, loss of facial volume all can have an impact of how the outside world see us and how we look at ourselves.

Regain Your Confidence

A facelift can help to restore a more confident and youthful you. Facial contour is improved with a better defined jawline contour, smoother neck. Loose sagging skin around the jowls area can also be eliminated.

Deter the aging process

Beyond the lightening of wrinkles and removal of excess fat on certain areas, a facelift can help address the effects of heredity, sun exposure, pollution, smoking, creating a new you which may look a decade younger than your real age.

Rejuvenated and youthful appearance!

One of the most important feedback as reflected by patients after a facelift procedure is the numerous compliments on the 'fresh' look they now portray.

This can have a very positive impact and complements their energetic physiological well being, brining an enormous impact on their social and professional lives.

Look younger, feel younger, feel better!
